*Note:* This product should only be applied using accepted principals and procedures of cement rendering as practised by professional renderers / pool plasterers. It is not a handyman product and must only be applied to completely clean and sound substrate. The natural quartz sand aggregates are applied by hand under different site and weather conditions so some variations may occur.

To enhance the appearance and colour of the finished plaster we recommend a light acid wash prior to filling the pool or an acid bath at some stage after the pool has been filled. These steps should only be carried out by experienced operators.

## Why choose Rainbow Quartz?

Rainbow Quartz is 100% manufactured in Perth using locally sourced raw materials. Many years of development and research, with particular regard to Western Australia's harsh climate, has produced this proven product.

Feedback from pool builders, renovators and architects, ensures that Rainbow Quartz will remain the leader for quality, innovation and durability. High performance ingredients and strict production values ensure the Ultimate Finishing Touch for your new or renovated concrete swimming pool.

## Quality Matters

Strict quality control in our manufacturing plant ensures consistency within and between batches of our leading colour range. The old way of blending colours and mixing different ingredients on site, is prone to error and no longer considered industry best practice.

## Smooth and easy care surface

Your pool, plastered correctly with Rainbow Quartz, will be smooth on your skin and meet Australian standards for a safe non slip surface. The smooth finish achieved by skilled applicators, inhibits algae buildup which can be a problem with some finishes.

## Rainbow Quartz is hard and durable

On a scale of 1 to 10, quartz is 7 (10 being diamond). The tens of thousands of coloured quartz particles in your pool plaster are permanently coated with complex inorganic pigments. The pigments we use achieve the highest possible rating for acid resistance, alkali resistance, light-fastness and weather fastness. The colour will not fade. The interior of your new or renovated concrete pool will be both beautiful and durable.

## Choosing your colour

When light passes through water and is refracted, the shorter wavelengths of blue and green are what we see. That's why our colours are variations on blue and green shades. Even Black Pearl makes your pool a deep green - like in a rock pool. Your choice will usually come down to whether you want a dark shade a light shade, or something in between. The darker colours, being harder to make, will cost more than the lightest colours.

## Renovating your pool?

Rainbow Quartz is perfect for renovating an older concrete pool. You might simply re-plaster the tired old interior, or really let your imagination go with a complete makeover. Why fiber-glass over a solid concrete pool, or install a vinyl liner, when you can achieve stunning results which are both longer lasting and cost effective. Contact us for details of quality trades people, skilled in re-plastering and pool renovation projects.
